SUMMARY

Data engineer with 2+ years of experience (including internships) building ETL/ELT pipelines, data integrations and web scrapers. Currently delivering high-throughput pipelines (up to 238K rows/sec) on PostgreSQL and ClickHouse and ML-backed services for telco and government clients, using AI coding agents (Claude Code) to ship faster across data, backend and ML work. Proven track record in optimising workflows, including cutting reporting time by 95%.

EXPERIENCE

Data Engineer, TAN Digital

Apr 2026 – Present · South Tangerang

- Migrated network KPI data for a national telco operator from PostgreSQL to ClickHouse with idempotent, incremental streaming pipelines processing up to 238K rows/sec (29.8M rows in ~2 minutes), cutting load time by up to 28% through cursor-based streaming and batch tuning, with Grafana Loki logging and dashboards for gap detection and pipeline health.
- Developed an end-to-end ID card (KTP) OCR service: labelled 384 images, trained a YOLOv8 field-detection model, benchmarked 7 OCR engines and deployed a CRNN pipeline on NVIDIA Triton with word splitting (spacing accuracy 0% → 84%) and fuzzy matching of region names, exposed through a Go backend API with AES-256-GCM field-level encryption for personal data.
- Developed a device-certification data integration for a government regulator: pipelines on a data integration platform extract certified-device records into a Go-based certification CMS, which maps and gap-fills them (unit conversion, provenance tracking) and delivers them to the national spectrum management system via SOAP, secured with OAuth2 PKCE SSO, RBAC and append-only integration logs.
- Built a Playwright scraper for a government network QoS dashboard that intercepts internal API responses across all filter combinations with crash-safe checkpointing, cutting capture time from ~3-4 minutes to under 1 minute per combination.

Data Engineer Intern, Alpha Data Labs

Dec 2024 – Dec 2025 · Remote

- Automated social media report generation, reducing manual processing time from 4 hours to ~10 minutes (95% efficiency gain) using Python and the Google Workspace API.
- Developed and maintained data pipelines for scraping, relevance classification and sentiment analysis for high-profile clients (beauty brands, SOEs, a ride-hailing brand and political campaigns).
- Built data visualisations with Pandas, Seaborn and Matplotlib that gave stakeholders actionable insights.
- Contributed to a WhatsApp chatbot for government feedback, improving public access to services.

Data Engineer Intern, Nolimit Indonesia

Jun 2023 – Nov 2023 · Bandung

- Developed scrapers for media websites, TikTok and Google Maps reviews, ensuring high data reliability.
- Maintained and optimised web scrapers to improve performance and handle site structure changes.
- Collaborated with analysts and engineers to improve access to business data and streamline internal workflows.

SELECTED PROJECTS

Middleware Data Integration Platform

2026

Contributed to a self-hosted platform (Go, React, PostgreSQL) where users build ETL/CDC pipelines on a visual canvas, load into a warehouse and publish data as REST APIs; shipped 49 commits covering CDC replication fixes, type mapping, worker parallelism, RBAC safeguards and monitoring dashboards.

Go · React · PostgreSQL · CDC · TypeScript · Redis

Social Media Analytics

2026

A full-stack data pipeline and analytics dashboard for monitoring TikTok and Instagram performance, built on Snowflake, dbt and Streamlit with AI-powered sentiment analysis via Snowflake Cortex.

Python · Snowflake · dbt · Streamlit · Prefect · Playwright · Web Scraping

TikTok Comments Scraper

2023

Scraped TikTok comments and metadata (user, date, video ID), converted them to JSONL and streamed them to Kafka.

Python · Playwright · PostgreSQL · Apache Kafka

EDUCATION

Information Systems, Indonesia Open University

2025 – Present · South Tangerang

Information Technology, Madiun State Polytechnic

2021 – 2024 · Madiun

GPA 3.80

SKILLS

- **Languages:** Python, SQL, Go, JavaScript/TypeScript
- **Data Engineering:** PostgreSQL, ClickHouse, Snowflake, dbt, Kafka, Pandas, n8n, CDC
- **ML & Model Serving:** YOLOv8, DocTR, TrOCR, PaddleOCR, ONNX, NVIDIA Triton
- **Tools & AI:** Playwright, FastAPI, Docker, Git, Grafana Loki, Claude Code (agentic workflows)

LANGUAGES

- Indonesian – Native
- English – Limited working proficiency
